

When planning your next overseas trip, it's important to discuss your travel plans with your doctor. Ensuring your routine immunizations are up to date, obtaining specific travel related vaccines and advice on specific disease risks and precautions can help make your trip a healthy and enjoyable one. We tailor our advice specifically to you and your destination. We offer Yellow Fever vaccination and provide the International Certificate of Vaccination for this. Some of our doctors have special interest and knowledge in the field of travel health and are very happy to help you plan for a healthy trip away! We also have access to resources to obtain the most up to date information regarding travel health. Ask for a travel health appointment when you book and to save time, complete our travel health questionnaire before your appointment (which includes an immunization history).
